

Press Release

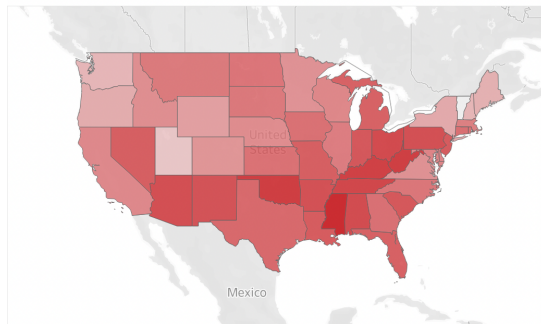

The Centers for Disease Control and Prevention (CDC) has recently disclosed data highlighting the effectiveness of COVID-19 vaccines in enhancing survival rates among those affected by the virus. An examination of their data reveals a correlation between higher vaccination rates and lower mortality rates across states. It is evident that states with more vaccinations, indicated by darker blue shades, report fewer deaths, as shown by the lighter red shades. COVID-19 continues to evolve, staying updated with vaccinations is more important than ever.

Vaccinations per 100 People

COVID-19 Deaths per 100,000 people

Southeastern states were typically hit harder

Staying ahead of the virus's evolution means keeping up-to-date with vaccinations. Heed the evidence, prioritize safety, and ensure you are vaccinated.
